SM validation overview

Filename issue; recorded event checks passed

Build2.9 | CSV schema 7 | 28 event rows

SM_Build2.9_v2.9.0_Device-A_20261107T205513245Z_87095b6b-1053-4c55-977e-d1312783a336 (1).csv

Recorded CSV checks

Pass	Fail	N/A	Inconclusive
119	1	5	12

Counts above exclude the full-requirement coverage inventory. Inconclusive means the export lacks sufficient evidence; it does not mean the app failed.

Pass

60-second rule: 3 close-cigarette pairs have saved Yes evidence.

119 checks matched the available CSV evidence, including the applicable timestamp, event-sequence and captured-value checks.

Fail

Export filename agrees with provenance

The supplied filename differs from the export metadata. A downloaded copy may have a suffix such as (1). This is a filename failure, not a cigarette-timing failure.

N/A

5 checks do not apply to this recorded scenario or schema.

Inconclusive

9 older close-cigarette pairs have no saved confirmation evidence. This file contains no exactly-60-second pair; that precise phone test is deferred. No earlier export was supplied for history comparison. CSV alone does not prove screen values, No/Cancel behavior, rejected taps, recovery, or all phone requirements. Build 3 requirements remain unavailable.

Expected totals are withheld while failed input checks remain unresolved.
